# Music Process Architecture

True Fan · Internal TF Engine · Photosynthesis pilot · October 2026

The Internal TF Engine is True Fan's own layer: the style presets, lyric rules, quality gates and feedback memory built up over this project. It drives Claude for songwriting and ElevenLabs Music for audio. Every one of the 11 songs went through the same run pipeline, once per style, and each round of feedback became a new engine rule: Hindi lyrics, then v2.5, then a genre intro.
